Drone maintenance log

One aircraft per sheet. Record actual work and follow the manufacturer's service intervals.

ORGANIZATION / OWNER

AIRCRAFT / ASSET ID

REGISTRATION / SERIAL

Date	Hours at service	Component	Part / battery serial no.	Condition / work performed	Battery cycles	Firmware version	Performed by	Next due (date / hours)	Checked by / test flight	Status / reference

Use a factual description of the condition, action, parts and test results. Record the serial number of any part or battery replaced and the firmware version after an update. Record the next date or aircraft-hour threshold from the applicable service instructions. Checked by records who verified the work; a completed entry does not itself certify the aircraft for service.
